ARE YOU USING THE WEB BUDGETING FEATURE FOR SMARTER CALL MANAGEMENT?

If not, it is time to do so for great benefits!

30 YEARS OF VALUE

CommControl Call Accounting, Billing & Reporting (CDR) application helps in controlling telephone calls made by Individuals / Teams / Divisions / Departments beyond a certain budget, thus helping organisations bring greater expenditure limit mechanism.

With this new updated feature, budgets can be allocated, and once the threshold is reached, a mail alert is sent to the Administrator. It is the Administrator's prerogative to apportion more funds, if required, to the Individual or team. Please note that there is a separate add-on module called Provisioning, for excess allocation of funds. If you have deployed a CISCO IP switch, the outgoing calls will be cut-off once the budget is reached. In the case of other Switches, it will trigger an alert and you can take control over the situation. *Isn't this what telecom cost control all about?*

GET MORE OUT OF YOUR BUDGET

Real-Time Budget Monitoring
Set and track call expense limits effortlessly

Automated Alerts & Notifications
Get instant updates on budget usage
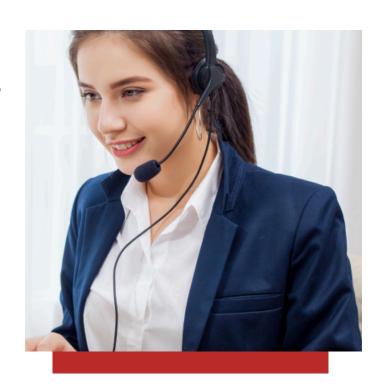

Detailed Cost Analysis
Gain valuable insights into call spending patterns

Customisable Controls
Define budget rules to prevent overspending

Improved Financial Planning
Reduce unnecessary costs and maximise ROI

A simple solution to control telecom costs.

Happy to help you optimise costs and improve efficiency!
